DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement filed on August 05, 2003 has been acknowledged and considered by the Examiner.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. **Claims 1 and 2** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim limitation disclosed in the claim, “*a second shift register to sequentially generate second row select pulses that reset pixels to a reset voltage*” can be interpreted as either “*a second shift register to sequentially generate second row select pulses that allow pixels to be reset to a reset voltage*” or “*a second shift register to sequentially generate second row select pulses that provide a reset voltage to pixels to reset the pixels*”.

Since the feature of the invention disclosed in the claim can be interpreted in multiple ways and thus it is unclear which interpretation represents the feature of the invention, the above mentioned claim limitation renders the claim indefinite.

Response to Arguments

5. Applicant's arguments regarding "Rejection Under 35 U.S.C. § 112" filed on May 09, 2006 have been fully considered but they are not persuasive.

According to the specification disclosed on page 7 line 26 – page 10 line 13, as provided by the applicant, row select pulses are used for selecting the pixels to be reset rather than resetting the pixels by themselves. The signal that reset pixels to a reset voltage is accomplished through column signal-electrodes by the column signal-electrode driver 5 as disclosed on page 8 lines 20-25 and pg 8 line 31 – pg 9 line 2.

However, since the Examiner acknowledges the claim limitation, "*a second shift register to sequentially generate second row select pulses that reset pixels to a reset voltage*", can be interpreted as multiple ways, one of which can be consistent with the feature of the invention disclosed in the specification, the Examiner rejects claim 1 under 35 U.S.C. § 112 2ND paragraph rather than 35 U.S.C. § 112 1ST paragraph.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morris (U.S. pat. no. 5,132,678) teaches a method of operating a display comprising an addressing step which includes using a first shift register means to designate operation of a second shift register means to select a function to be formed.

Hashimoto (U.S. pub. no. 2003/0025815 A1) teaches an image processing apparatus comprising two scanning circuits, one of which reset pixels to a reset voltage.
